Plexos

• Manual and visual construction planning; • One step in project management; • Project tracking, resource management, project budget management and much more; • Excellent time-tracking; • Import BIM; • Tasks and sub-tasks. p BIM New Tool £80.00 £ i.hcs.com Publisher: Horison Corporation x3000 Sep 2017 Sep 2017 Plexos is a BIM project management application that aims to facilitate efficient resource and cost planning. With its help, managers can keep track of used and available resources, locations, upcoming tasks and operations, relationships and, of course, the project's budget. Ribbon-based GUI and various visualization options Plexos features a multi-panel interface that allows one-click access to the project's schedule, BIM objects, properties, relationships, and costs. Additional control tools are displayed in the ribbon-based toolbar, where users can manage activities, create schedules, publish the project, customize view modes, and more. There are various visualization options in Plexos. The Gantt chart reveals all the upcoming, current, and completed tasks, while other types of charts and graphs show the data from a different perspective. Graph charts and calendars can also be used to organize the upcoming activities. Aside from resource management, Plexos can also analyze the data to determine the earned value. Reliable activity tracker and relationship management Plexos comes with full support for BIMServer.Center, enabling users to connect to a server to load BIM projects or link models. Thanks to the integrated IFC manager, Plexos can open IFC BIM models, which can display complex construction-related data. It also features support for budget databases and BC3 cost management. One of the advantages of Plexos relies in its activity tracker and manager. The application can create complex schedules with multiple activities and sub-activities, managing recurring tasks and relationships between tasks in terms of both time and production rate. Thus, delays can be managed much easier. BIM management tool based on the lean construction principles The working environment of Plexos may seem a bit crowded but to those who are accustomed with BIM project management tools, having all the options within reach is a good thing. On the downside, while the data can be printed, there are no reporting options. Nevertheless, the entire project can be exported as a Microsoft or a Prima 09e8f5149f

What's New in the Plexos?

Plexos Description: The company Plexos is the most reliable software applications developer in this field. Plexos has been announced and launched already in 2003. Over time, the company has developed not only several project management applications, but also various CAD programs, e.g., he Building Information Modeling (BIM) applications like BIM Architect. Today the company manages several subsidiaries and branch offices all over the world. Moreover, the company has several regular clients in business sectors like automotive, aviation, architecture, etc. The company has also developed a professional, web-based CAD tool, SW Platform, which is now in production. It is designed as a design service platform for architects, engineers, and interior designers. The intention to develop the whole software family in the future is quite clear now. The staff of the company works very efficiently with the idea of becoming a reliable supplier of user-friendly, quality-oriented programs. This software is a mid-range application in terms of price. The download and installation package is quite small and can be installed and used with any PC, notebook, or Mac computer. The look of the program has been described as a combination of old-fashioned, clean, and unique. Although most of the users' comments are positive, some customers have expressed their dissatisfaction in some features like several visual differences between UBIX and MS Project and the lack of a feature to display BIM models. The 1.4 version of the program has been released in 2013. This version includes some improved features, like visualizations of RIM data, support for the latest BIM standard, and several enhancements to the BIM Architect program. The BIM Developer, part of the Plexos suite is already included in this release as well. The update to v2.6 is available for download now. This release comes with a host of new features such as the new mobile application, new template and version control system, new tool to remove the need for Project Server, and adding the capability to export charts as PDF files. The most remarkable new feature with this update is the new mobile app for Apple devices. With this app, users will be able to manage a BIM project on the go. It offers a plethora of tools such as e-mail notifications, bookmarks, resource view, task scheduling, and much more. The latest update of the building management application is available now. This release includes new features like the new
